

ICT-Start – Session 01

Module 1: Introduction to Programming

December 12, 2022

Let's get to know each other!

- Name
- Place of work and current position
- Experience in the field of IT
- What do you expect as an outcome of this training?

Course Introduction

ICT Start

PROGRAMME DE FORMATION

> Module 1	Introduction to Programming	+ -10h
> Module 2	Creating static web pages using HTML5 and CSS3	+ -26h
> Module 3	Client-Side Scripting 1	+ -24h
> Module 4	Client-Side Scripting 2	+ -20h

Terms definition

- What is a program?
- What is a programming language?
- **Q:** *Why can't we use a natural language such as English to write programs?*
- **A:** Natural languages are ambiguous. We need a **formal** language so that each and every program line is unambiguously understood by everyone.
 - Example: *"I saw Alice with a telescope"*. Question: *Who has the telescope?*
- **Q:** Do you know a formal language?
- What is an algorithm?
 - Analogy: recipe

Pita bread algorithm

Code for Static Content

Some Analogy

3 TYPES OF DEVELOPERS

Frontend

learn

HTML, CSS, Javascript,
Bootstrap, Foundation,
Backbone frameworks

do

The creation of user-friendly
webpages, Master of screen
visuals and functionality,
able to creatively solve
user-centered issues

are

Creative, imaginative,
innovative and
empathetic

Backend

learn

PHP, Python, Ruby,
Server programme
SQL/Oracle

do

The building and
maintaining of the web
server, application and
database, ensuring
frontend operations
are smooth

are

Analytical, fast,
composed, logical,
detail oriented

Full-stack

learn

All of the languages
for both frontend
and backend

do

Mostly backend work,
but are also adept at
frontend languages
to manipulate
how the site looks
on the user's end

are

Innovative, disciplined,
multi-taskers

Setup and Github Pages

- Environment (Atom)
- Folder structure (www)

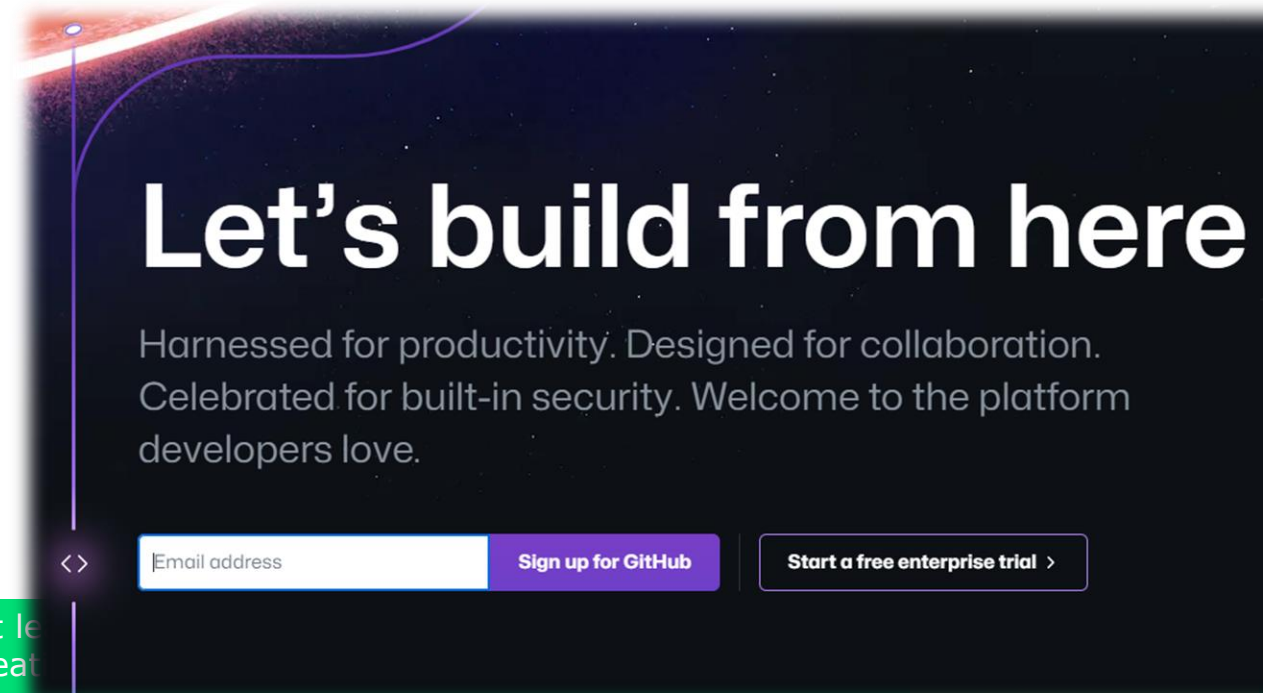

GitHub Pages

- There exist many ways to publish a website on the WWW
- A free and simple way is GitHub Pages

Step 1: Create a GitHub Account

- First go to <https://github.com>
- And create a free account (you will need an email)
- Verify the mail using the Launch Code you will receive
- Answer the boring questions
- Choose “Continue for free”

Step 2: Configure GitHub Pages

- First we need to create a repository
- Visit: <https://github.com/new>
- Choose “www” as repository name
- Leave everything else as it is (Public must be selected) and click Create repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?
[Import a repository.](#)

Owner *

githubAtGashi

Repository name *

www

Great repository names are short and memorable. Need inspiration? How about [improved-waffle?](#)

Description (optional)

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Step 2: Configure GitHub Pages

- Leave the next site open as we need the URL later

Quick setup — if you've done this kind of thing before

Set up in Desktop

or

HTTPS

SSH

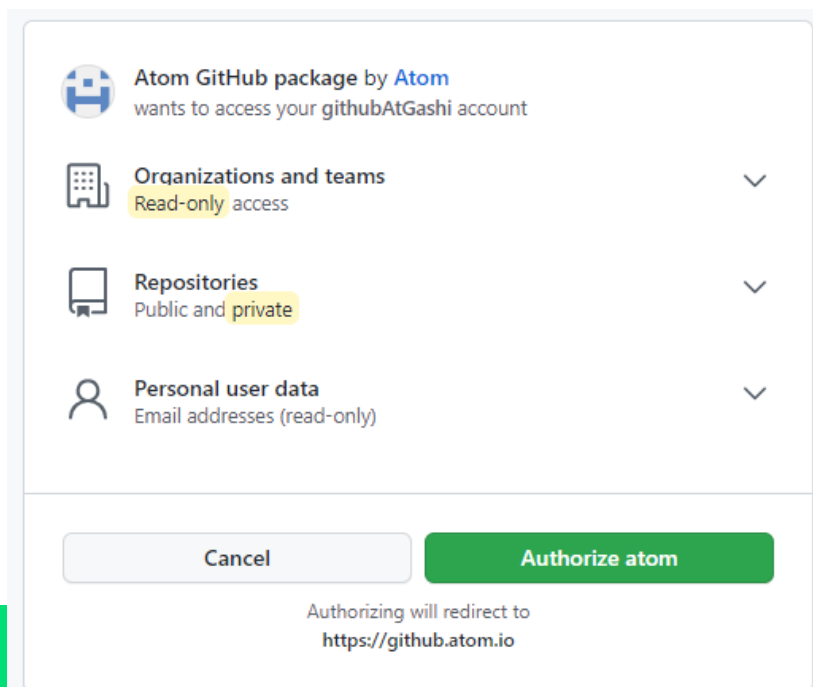

`https://github.com/githubAtGashi/www.git`

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

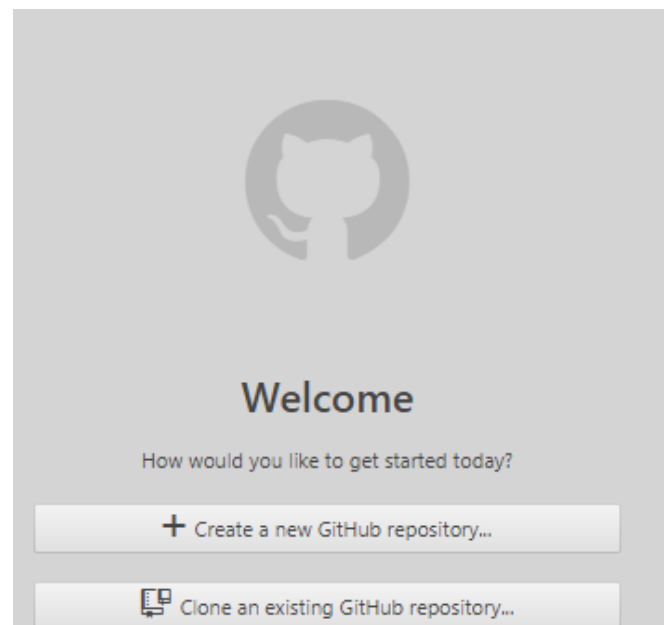

Step 3: Link with Atom

- In Atom, click on the bottom right at the Github
- Visit <https://github.atom.io/login>
- And authorize atom

Step 3: Link with Atom

- You will get a token, copy it and go back to Atom and paste the token in the dedicated Text field
- Press login, and you should see a Welcome message

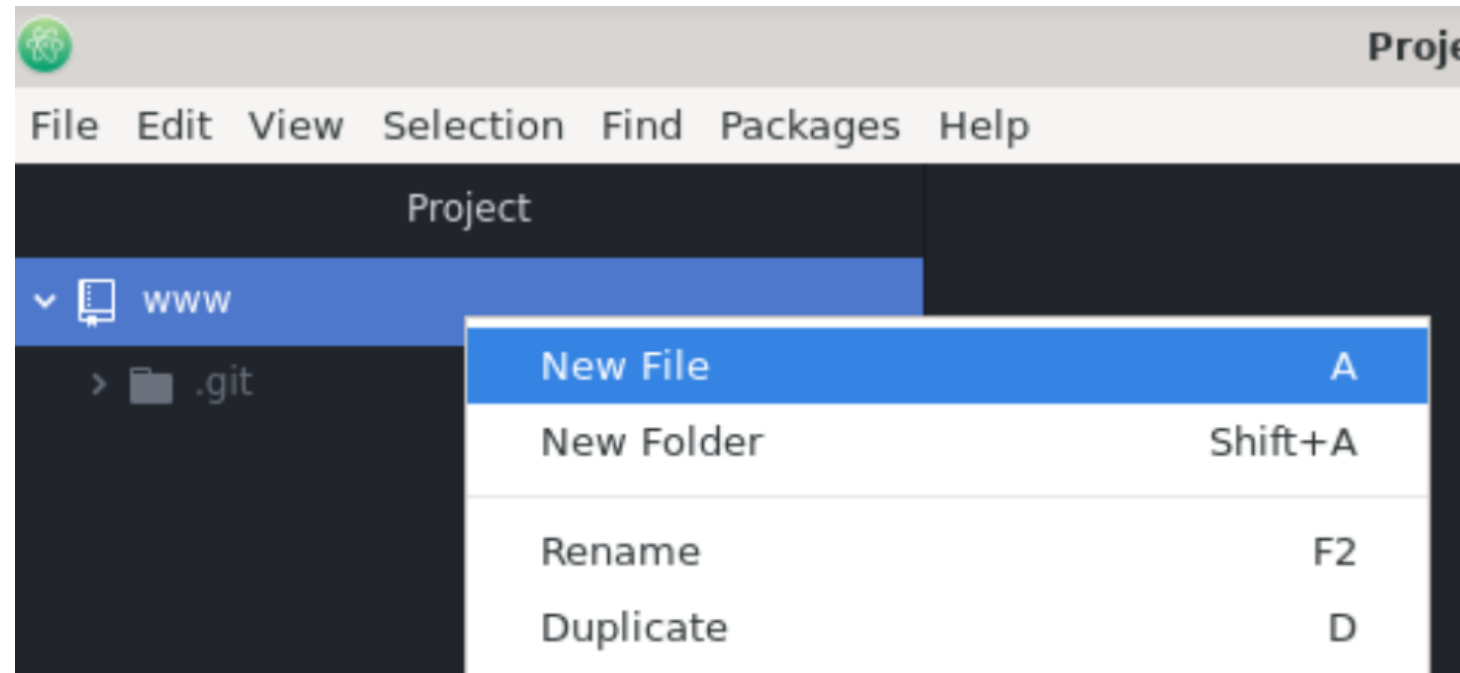

Step 4: Clone your repository

- We need to link our repository to Atom using the repository link
- Copy the link from the github page from Step 2 and click in Atom at “Clone an existing repository”
- In the popup window, paste the url of the www repository and click Clone

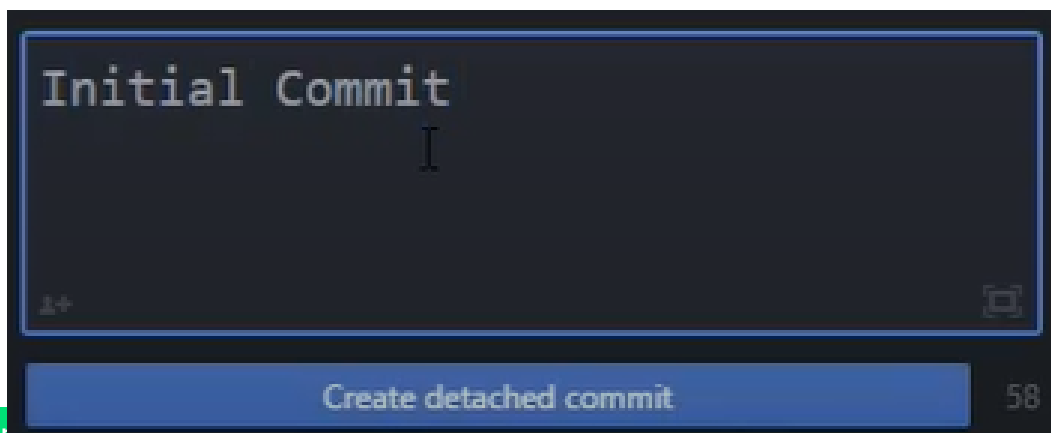

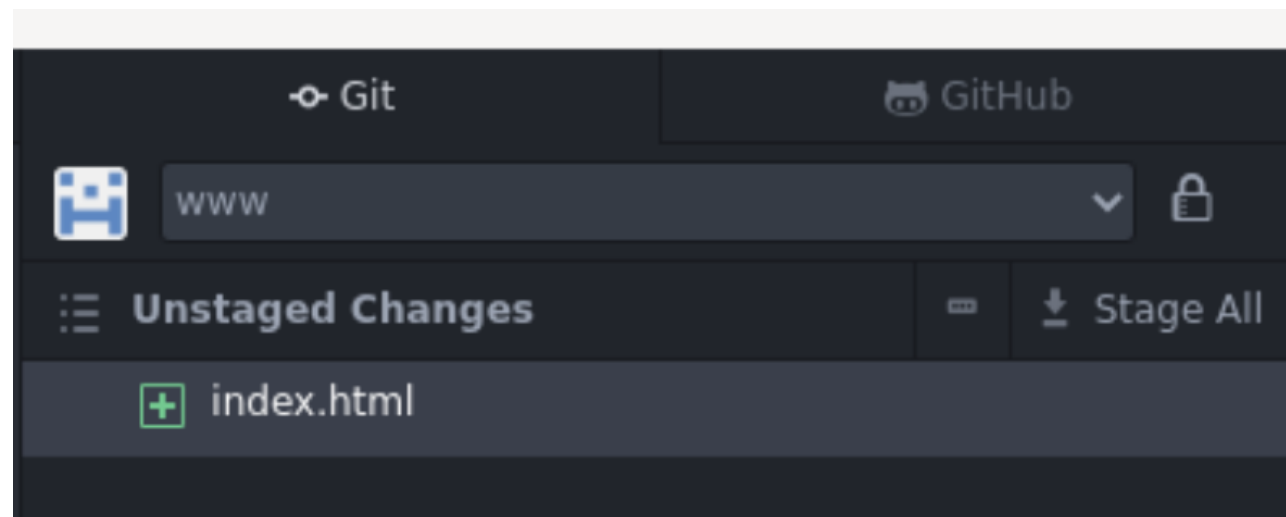

Step 5: Create a test file

- In Atom on the left hand side right-click on the www folder and press new file
- Call it `index.html`
- Write “Hello world!”
- Save the file

Step 6: Initial commit

- On the top right you will see the index.html file
- Below type in a message such as “Initial Commit” and press “Create detached commit”

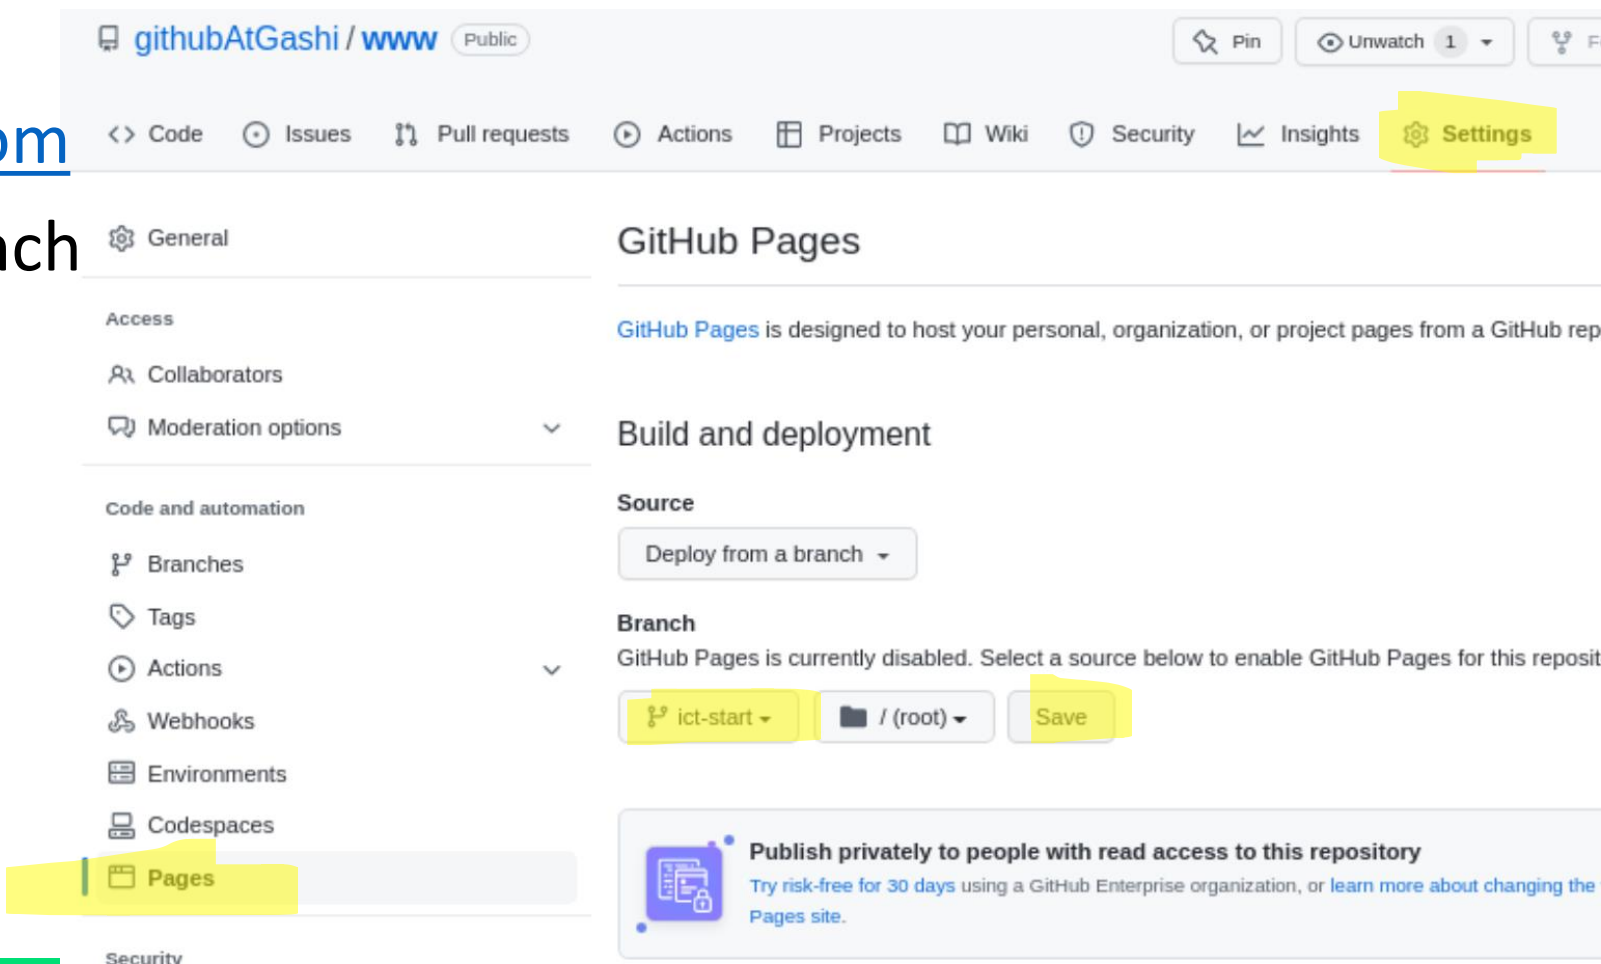

Step 7: Create branch

- At the bottom create a new branch such as “ict-start”
- Then you will see a cloud icon next to it with the description “Publish”
- Click on “Publish”

Final Step 8: Use branch for GitHub Pages

- Go back to <https://github.com>
- Click on the left at your branch
- Then click on the most right menu item “Settings”
- On the left menu click on “Pages”

The screenshot shows the GitHub repository settings page for 'githubAtGashi / www'. The 'Settings' tab is selected in the top right. On the left sidebar, the 'Pages' option is highlighted. The main content area shows the 'GitHub Pages' section, which is currently disabled. The 'Source' dropdown is set to 'Deploy from a branch'. The 'Branch' dropdown is set to 'ict-start'. A 'Save' button is visible. A banner at the bottom of the settings page reads: 'Publish privately to people with read access to this repository. Try risk-free for 30 days using a GitHub Enterprise organization, or learn more about changing the Pages site.'

GitHub Pages

GitHub Pages is designed to host your personal, organization, or project pages from a GitHub repository

Your site is live at <https://githubatgashi.github.io/www/>

Last deployed by  githubAtGashi 11 minutes ago

Build and deployment
